Education

Northeastern University — Boston, MA
MSc Artificial Intelligence **GPA: 4.0/4.0** — *Expected May 2027*
Coursework: Deep Learning (PhD-level), Agentic AI, Reinforcement Learning, Algorithms, Applied AI Programming

Binghamton University — Vestal, NY
BSc Computer Science (AI Track), Summa Cum Laude — *May 2025*

Istanbul Technical University — Istanbul, Turkey
BSc Computer Science (Dual-Degree Program), High Honor List — *May 2025*

Work Experience

Startup — Founding Engineer (AI / ML)
2026 – Present

- Architected the end-to-end ML pipeline for an AI-driven counterparty credit-risk platform: models scoring debtor creditworthiness and corporate structure from public web signals, fused with a domain-expert ontology.
- Built the data ingestion, feature, and model-serving stack on Docker, Terraform, AWS ECS, and GitHub Actions CI/CD (MLOps).
- Designed and shipped the supporting multi-tenant analytics SaaS (Next.js, TypeScript, PostgreSQL) with a tested profitability engine and enterprise authentication (WorkOS, RBAC, SSO).

Northeastern University — Graduate Teaching Assistant — Boston, MA
2026 – Present

- Teaching assistant for CS5180 Reinforcement Learning and CS5130 Applied AI Programming; mentor 100+ graduate students in Python, PyTorch, and ML workflows.

Softtech — Data Analytics & AI Intern — Remote
Jul 2022 – Aug 2022

- Developed clustering and XGBoost models evaluated with AUC and cross-validation, improving predictive performance by 10%.
- Refactored ML evaluation workflows to improve reproducibility, metric consistency, and experiment tracking.

Kopernik Observatory — Software Developer Intern — Vestal, NY
Aug 2024 – May 2025

- Built OpenCV computer-vision pipelines converting satellite signal data into infrared/thermal imagery; cut runtime 40% (25 → 15 min) and automated 100+ daily jobs.

Asseco-SEE — Software Developer — Istanbul, Turkey
Mar 2024 – Jun 2024

- Optimized 20+ Java microservices in a distributed fraud-detection platform (1M+ daily transactions) for major Turkish banks; raised throughput 18% via memory and performance tuning.

Projects & Research

LLM Fine-Tuning & Applied ML Portfolio — GitHub — *2022 – Present*

- Built 10+ ML/CV projects including LLM fine-tuning with LoRA, transformer models, LSTM forecasting, CNNs, GANs, stereo vision, and object tracking.

KL-Belief Communication Gating — Multi-Agent Deep RL Research — *2025 – Present*

- Implemented a KL-divergence belief-based communication gate in PyTorch for multi-agent RL on a distributed HPC cluster; arXiv preprint, targeting the ALA Workshop at AAMAS 2027. [Paper] [Code]

Offline Multi-Agent Preference Learning (O-MAPL) — Research Collaboration — *2026*

- Reproducing and extending the O-MAPL offline MARL baseline (PyTorch) in collaboration with a Northeastern PhD researcher; adapting the method to the SMAX (JaxMARL) environment for offline dataset generation and policy evaluation.

NGCF-PyTorch — Recommender Systems & Information Retrieval — *2024*

- Improved a Neural Graph Collaborative Filtering model with LayerNorm and hinge/BCE losses for retrieval and ranking, enhancing convergence stability.

TSA Global (Non-Profit) — ML & Backend Technical Lead — *Sep 2024 – Present*

- Designed and deployed a hybrid recommendation / information-retrieval engine combining semantic embeddings, graph-based collaborative filtering (Jaccard, KNN), and Logistic Regression ranking, evaluated with Precision@K.

Technical Skills

Machine Learning: LLM Fine-Tuning (LoRA), Transformers, Deep Learning, PyTorch, TensorFlow, XGBoost, Computer Vision (OpenCV), Recommender Systems, Information Retrieval, Multi-Agent RL
MLOps & Cloud: Docker, AWS (ECS, RDS, ECR), Terraform, CI/CD, model serving, Linux, Git
AI-Assisted Development: Claude Code, LLM-assisted coding workflows
Programming: Python, Java, C++, SQL, JavaScript/TypeScript
Data: PostgreSQL, SentenceTransformers, pandas/NumPy
